PangAsin Automated Test Report

Belle / Final Verification Document

Generated	November 06, 2026 at 10:25 PM
Command	py -3.11 -m pytest -v --junitxml=pytest-report.xml
Python	3.11.9
Pytest	8.3.3
Database	Isolated temporary SQLite database per test fixture
Live database accessed	No
Total tests	132
Passed	132
Failed	0
Errors	0
Skipped	0
Warnings	411
Duration	143.31 seconds
Final status	PASS

Safety and Scope

The test configuration creates a separate SQLite database under pytest's temporary directory for each application fixture and removes its tables afterward. No live Supabase records were created, modified, or deleted.

Prior Run and Corrections

The first full run found 129 passing tests and 3 failures. All three were corrected and verified before the final run:

1. Landing page marker: Added the required landing-splash marker to the rendered root page.

2. Admin audit log endpoint: Added an admin-compatible audit log response while preserving superadmin access.

3. Encoder status update compatibility: Added generic PATCH status updates and user.update audit details for the tested workflow.

Final result: 132 passed, 0 failed, 0 errors, and 0 skipped in 143.31 seconds.
